Update

After Backlog Challenges NVD Shuts Down

PHOEN
SECURI

- **Timeline of Events**

- **Spring 2024** – NIST begins falling behind on CVE ingestion, sparking concern across the security community.

- **October 2024** – CVE submissions spike by 32%, overwhelming the National Vulnerability Database (NVD).

- **February 2025** – Early reports emerge that MITRE's CVE contract is at risk of non-renewal.

- **March 2025** – MITRE initiates layoffs; over 400 staff are impacted.

- **April 10, 2025** – MITRE publicly confirms its funding for CVE and CWE will expire on April 16.

- **April 16, 2025 – Midnight** – The CVE program officially halts operations. MITRE stops issuing new CVEs
- **April 16, 2025 – CVE Foundation possibly stepping in**
- **April 16, 2025** – The EU has launched a distributed database: GCVE.eu
- **April 16, 2025** – **CISA Steps in temporarily to extend NVD Funding**

MITRE | SOLVING PROBLEMS FOR A SAFER WORLD®

April 15, 2025

Dear CVE Board Member,

We want to make you aware of an important potential issue with MITRE's enduring support to CVE.

On Wednesday, April 16, 2025, the current contracting pathway for MITRE to develop, operate, and modernize CVE and several other related programs, such as CWE, will expire. The government continues to make considerable efforts to continue MITRE's role in support of the program.

If a break in service were to occur, we anticipate multiple impacts to CVE, including deterioration of national vulnerability databases and advisories, tool vendors, incident response operations, and all manner of critical infrastructure.

MITRE continues to be committed to CVE as a global resource. We thank you as a member of the CVE Board for your continued partnership.

Sincerely,

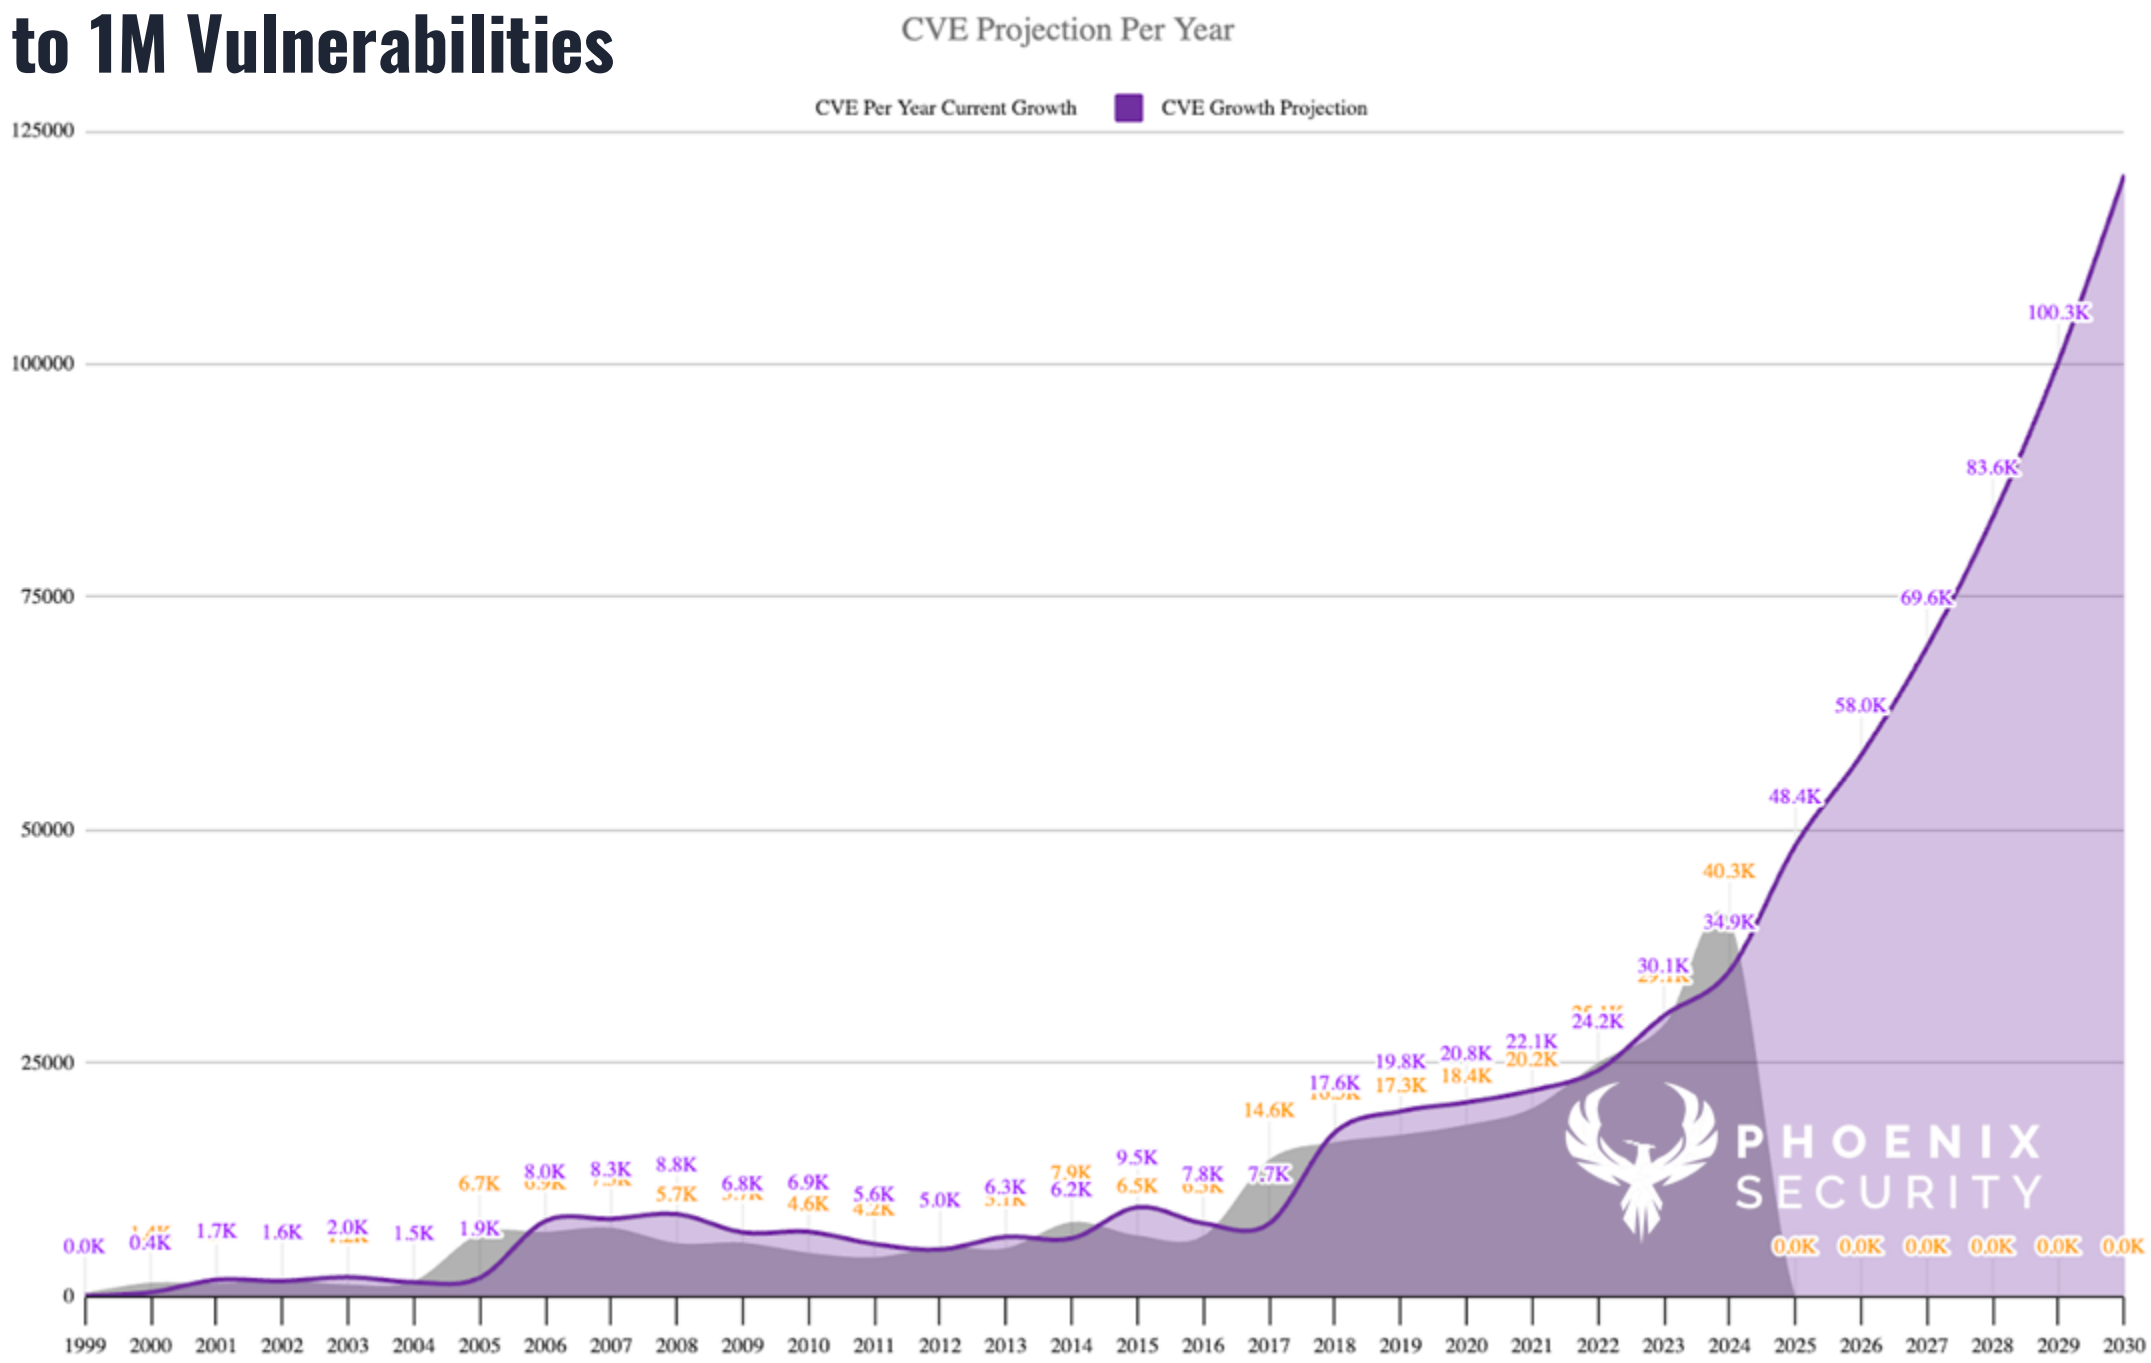
Yosry Barsoum
VP and Director
Center for Securing the Homeland (CSH)

“CVE, as a cornerstone of the global cybersecurity ecosystem, is too important to be vulnerable itself,” said Kent Landfield, an officer of the Foundation. “Cybersecurity professionals around the globe rely on CVE identifiers and data as part of their daily work—from security tools and advisories to threat intelligence and response. Without CVE, defenders are at a massive disadvantage against global cyber threats.”

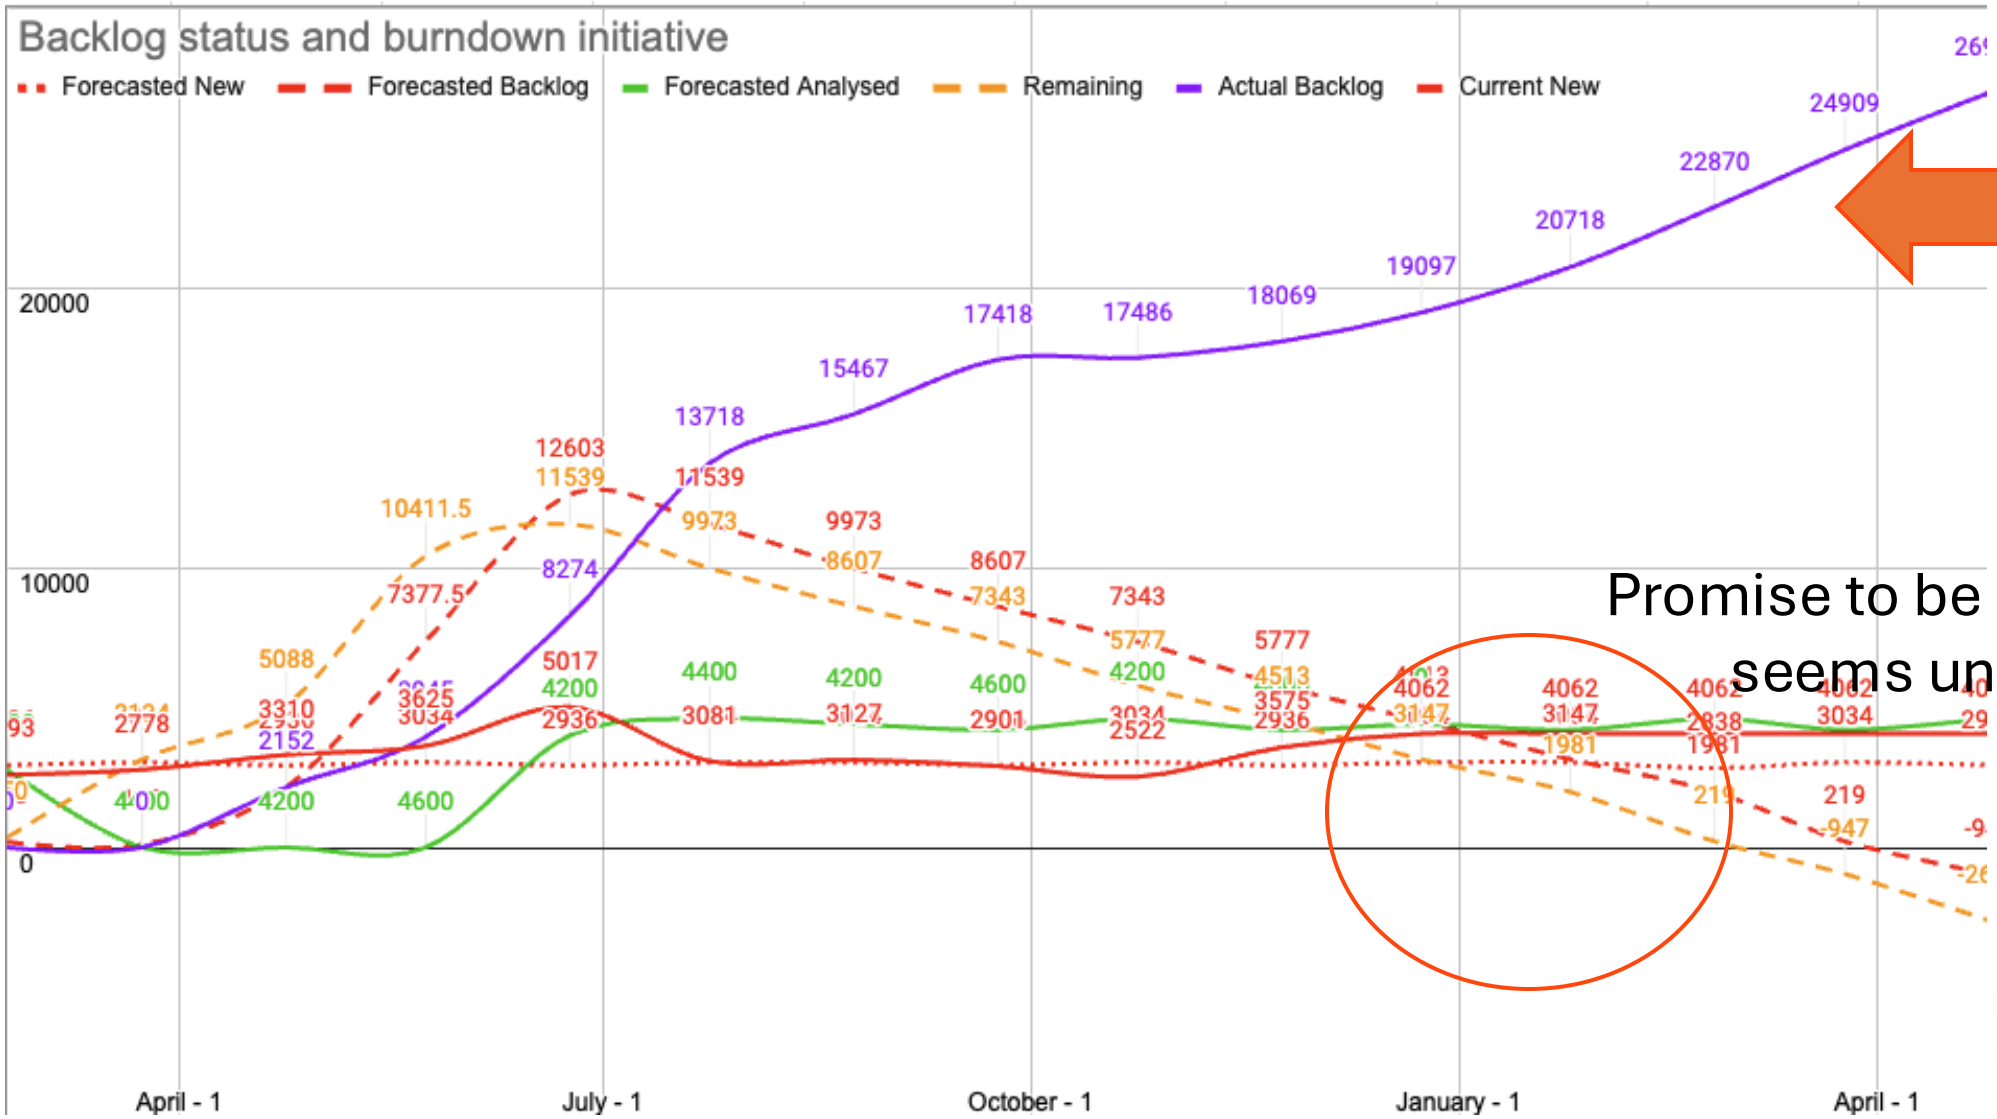
The formation of the CVE Foundation marks a major step toward eliminating a single point of failure in the vulnerability management ecosystem and ensuring the CVE Program remains a globally trusted, community-driven initiative. For the international cybersecurity community, this move represents an opportunity to establish governance that reflects the global nature of today’s threat landscape.

“The CVE Program is invaluable to the cyber community and a priority of CISA. Last night, CISA executed the option period on the contract to ensure there will be no lapse in critical CVE services. We appreciate our partners’ and stakeholders’ patience.”

Road to 1M Vulnerabilities



Backlog Situation



Promise to be close to 0 seems unlikely

Current CWE Completion – 50% incomplete

Field	Description
`GCVE`	Prefix indicating a Global CVE ID
`GNA ID`	Unique identifier for the GCVE Numbering Authority
`YEAR`	The year of disclosure or allocation
`UNIQUE ID`	A GNA-assigned identifier that must be unique for vulnerability allocated at the GNA

Examples

GCVE ID	Description
`GCVE-0-2023-40224`	Existing CVE (`CVE-2023-40224`) mapped into GCVE format
`GCVE-1-2025-00001`	using the GCVE allocation system
`GCVE-5-2024-12345`	Vulnerability assigned by GNA with ID 5 in the year 2024

Reserved GNA Identifiers

GNA ID	Assigned Entity	Notes
0	Legacy CVE Identifiers	All existing CVEs mapped here
1	CIRCL	First organization using GCVE model
...	(To be assigned)	Other GNA IDs will be allocated

Severity	Alternative IDs
CVSS Base Score: 9.3 (v4.0) (CVSS:4.0/AV:N/AC:L/AT:N/PR:N/UI:N/VC:H/VI:H/VA:H/SC:N/SI:N/SA:N)	CVE-2025-3579 GHSA-2ff5-6f9m-635q

EPSS Score 0.00 %

Critical vulnerabilities

ID	Alternative ID	Exploitation	CVSS	Vendor	Changed
EUVD-2022-49136	CVE-2022-46319 GSD-2022-46319	0.10%	v3.1: 9.8	Huawei	16 hours ago
Fingerprint calibration has a vulnerability of lacking boundary judgment. Successful exploitation of this vulnerability may cause out-of-...					
EUVD-2022-49137	CVE-2022-46320 GSD-2022-46320	0.10%	v3.1: 9.8	Huawei	16 hours ago
The kernel module has an out-of-bounds read vulnerability. Successful exploitation of this vulnerability may cause memory overwriting.					
EUVD-2022-49140	CVE-2022-46323 GSD-2022-46323	0.10%	v3.1: 9.8	Huawei	16 hours ago
